Green Granite Slab

Our kinds of green granite slab have many different green colours. The emerald pearl granite posse beautiful green emerald flowers shining over a bluish green background, and seaweed green has dark to light green background with light golden black movement with a light shine. The green granite slab is more durable than virtually any synthetic flooring surface, so green granite is used as a building material in the form for wall cladding, roofing and flooring and a variety of other interior and exterior applications and especially for counter tops, kitchen work tops and vanity units and is the most popular material for monuments and memorials.
